

Ooo

Hämtat från boken Coakley: *Winning Chess Strategy for Kids*

Our first example shows how a king can overpower a rook.

The pawns are all locked up and it looks impossible to get through them. But the white king has an idea!

1. **Rxg7!**      **Rxg7**
2. **Kh6!**

For the price of a rook, the king and g-pawn are free to advance. The black rook is no match. (2.Kf6 also wins.)

2. ...      **Rg8**
3. **Kh7**      **Re8**
4. **g7**      **Ke7**

4...Re7 5.Kh8 Re8+ 6.g8=Q will lead to the same thing.

5. **g8=Q**      **Rxg8**
6. **Kxg8**      **Ke8**
7. **Kg7**

Material is equal again, but won't be for long. The white king is in position to win the black e-pawn. 7...Ke7 8.Kg6 Ke8 9.Kf6 Kd7 10.Kf7 Kd8 11.Kxe6 1-0
